# TRACKING THE TRENDS 2006 

## EXECUTIVE SUMMARY

## Purpose and Findings

The purpose of this report is to evaluate the trends that have occurred over the past several years on the transportation system in the Orlando Metropolitan Area. The report contains information on such transportation modes as private automobiles, transit, aviation, rail, bicycling and walking. Statistics with regard to commercial trucks, as well as passengers and freight at Port Canaveral, have also been included. In addition, population and employment data are included for comparison purposes. This information is presented in a series of tables and bar charts that show recent changes in these various categories.

These are some examples of findings from the report:

- From 2002 to 2006, the estimated population of the Orlando Metropolitan Area (Orange, Osceola and Seminole Counties) increased by $\mathbf{1 4 . 3 \%}$.
- From 2001 to 2005, the number of vehicle miles traveled in the Orlando Metropolitan Area increased by $\mathbf{1 8 . 1} \%$.
- From FY 2001/02 to 2005/06, the number of registered vehicles in the Orlando Metropolitan Area increased by $\mathbf{1 7 . 4 \%}$.
- From 2001 to 2005 , the number of traffic accidents in the area increased by $\mathbf{1 2 . 1} \%$, while the number of fatalities increased by $\mathbf{1 3 . 6 \%}$.
- From FY 2001/02 to 2005/06, the number of gallons of gasoline consumed in the Orlando Metropolitan Area increased by $\mathbf{1 5 . 2 \%}$.
- From 1999 to 2003, the travel time index in the area increased by 2.4\%. (The 2003 travel time index data was the latest available at the time this report was published.)
- From 2002 to 2006, the number of E-PASS/SunPASS transponders in use on the toll roads in the area increased by $\mathbf{8 3 . 3} \%$.
- From FY 2001/02 to 2005/06, the number of passengers on the LYNX transit system increased by $23.3 \%$.
- During the same period, the number of passengers on the I-Ride trolley system increased by 14.4\%.
- From 2002 to 2006, the total number of passengers at the Orlando International Airport increased by 30.7\%.
- During the same period, the total number of passengers at the Orlando Sanford International Airport increased by $\mathbf{3 0 . 3} \%$.
- From FY 2001/02 to 2005/06, the number of passengers using the Amtrak rail service in the Orlando Metropolitan Area decreased by $\mathbf{5 . 1 \%}$. (See the note on page 61.)
- Between the 1990-1997 time period and the 1998-2005 time period, the rate of bicyclist injuries per 100,000 population decreased by $\mathbf{4 6 . 6} \%$, while the rate of bicyclist fatalities per 100,000 population decreased by $\mathbf{1 4 . 3 \%}$.
- During the same period, the rate of pedestrian injuries per 100,000 population decreased by $\mathbf{2 2 . 5} \%$, while the rate of pedestrian fatalities per 100,000 population decreased by $\mathbf{5 . 3} \%$.

## Percentage Changes for Last Two Years of Data

The following tables contain the percentage changes for the last two years of the data included in this report.

## SOCIOECONOMIC

| Population | 2005 | 2006 | \% Change |
| :---: | :---: | :---: | :---: |
| Orange County | 1,043,437 | $1,079,524$ | + $3.5 \%$ |
| O sceola County | 235,156 | 255,903 | + 8.8 \% |
| Sem inole County | 411,744 | 420,667 | + $2.2 \%$ |
| Total | 1,690,337 | 1,756,094 | + $3.9 \%$ |

| Employm ent | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ | \% C hange |
| :--- | ---: | ---: | ---: |
| Orange County | 533,519 | 568,257 | +6.5 |
| O sceola County | 109,636 | 116,774 | +6.5 |
| Seminole County | 220,801 | 235,117 | +6.5 |
| Total | $\mathbf{8 6 3 , 9 5 6}$ | $\mathbf{9 2 0 , 1 4 8}$ | $+\mathbf{6 . 5}$ |

| Hotel/Motel Rooms | $2004 / 05$ | $2005 / 06$ | \% Change |
| :---: | :---: | :---: | :---: |
| Orange County | 79,017 | 77,521 | -1.9 \% |
| Osceola County | 26,927 | 26,325 | -2.2\% |
| Seminole County | 4,658 | 4,655 | -0.1 \% |
| Total | 110,602 | 108,501 | -1.9\% |

Note: The numbers of hotel/motel rooms were lower in 2004/05 and 2005/06 than in previous years due to rooms being out of commission as a result of hurricane damage, as well as units being converted to condominiums.

## HIGHWAY

(The following traffic counts reflect the averages of the location counts for each roadway shown in the tables on pages 4-7 and 13-14.)

| Traffic Counts | 2004 | 2005 * | \% Change |

## TRACKING THE TRENDS 2006

## INTRODUCTION

The transportation system of an urban area is comparable to the circulatory system of a human body. Just as the circulatory system transports blood to organs, muscles, etc., an area's transportation system transports people and goods to and from work, school, shopping, entertainment, places of worship, health facilities, and other locations. Thus, the condition of an urban area's transportation system has a very direct impact on the "health" of the area as a whole. If an area's highways are overly congested or there is not adequate transit, rail or air service, this will have an adverse effect on the area's economy and the overall quality of life of its citizens.

The purpose of this report is to provide an overview of the condition of the Orlando Metropolitan Area's transportation system by evaluating the trends that have occurred over the past several years on the area's highway, transit, aviation, rail, and bicycle and pedestrian systems. In addition, information on freight movement by air and ship is included. This data is presented using various indicators of activity for these transportation modes.

This information was provided by such state agencies as the Florida Department of Transportation, Florida's Turnpike Enterprise, and the Florida Department of Highway Safety and Motor Vehicles. Additional information was provided by the Florida Energy Office, the Florida Department of Environmental Protection, and the Florida Department of Business and Professional Regulation.

Local agencies that provided information include the Orlando-Orange County Expressway Authority, LYNX, the International Drive Master Transit and Improvement District, the Greater Orlando Aviation Authority, the Sanford Airport Authority, the Kissimmee Gateway Airport, the University of Central Florida, and the Orange, Osceola and Seminole County School Districts. The Federal Aviation Administration, Amtrak, the US Census Bureau, the University of Florida's Bureau of Economic and Business Research, the Florida Agency for Workforce Innovation, the Texas Transportation Institute, and the Canaveral Port Authority provided additional information, as did Orange, Osceola and Seminole Counties, and the City of Orlando. METROPLAN ORLANDO would like to express its appreciation to all of these agencies for their assistance in compiling this report.

Note: This report is prepared on an annual basis by METROPLAN ORLANDO staff using information provided by many different sources, as described in the previous paragraphs. This is the latest information that was available at the time of the publication of this report for the various indicators used to measure transportation system activity over a five year period. The beginning and ending years vary for different indicators, depending on what year the latest data is available. For example, for some indicators, the latest available data is for 2005, while other indicators have data available through 2006. In addition, the data for some indicators is based on calendar years, and the data for others is based on fiscal years.

## ORLANDO METROPOLITAN AREA PROFILE

The Orlando Metropolitan Area, which consists of Orange, Osceola and Seminole Counties, is one of the fastest growing metropolitan areas in the country. In recent years, the economy of this area has largely been based on tourism due to the location in the area of such major tourist attractions as Walt Disney World, Universal Studios, and Sea World, as well as many other smaller attractions. In addition, the high tech industry has a substantial presence in the Orlando Metropolitan Area, and includes such major employers as Lockheed Martin and AT\&T. Other major employers in the area include the University of Central Florida and the Orlando International Airport.

## Population

The following table shows the population for the counties and municipalities in the Orlando Metropolitan Area from 2002 through 2006:

| Orange County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |

## Hotel/Motel Rooms

As mentioned earlier, tourism and business/convention travel are important components of the economy of the Orlando Metropolitan Area. As a result, there are a large number of hotel and motel rooms in the region. The following table shows the number of hotel/motel rooms in the Orlando Metropolitan Area from FY 2001/02 through 2005/06:

| HoteI/Motel Rooms | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Orange County | 76,447 | 78,174 | 79,481 | 79,017 | 77,521 |
| Osceola County | 28,138 | 28,029 | 28,272 | 26,927 | 26,325 |
| Seminole County | 4,431 | 4,664 | 4,676 | 4,658 | 4,655 |
| Total | $\mathbf{1 0 9 , 0 1 6}$ | $\mathbf{1 1 0 , 8 6 7}$ | $\mathbf{1 1 2 , 4 2 9}$ | $\mathbf{1 1 0 , 6 0 2}$ | $\mathbf{1 0 8 , 5 0 1}$ |

Source: Florida Department of Business and Professional Regulation
Note: The numbers of hotel/motel rooms were lower in 2004/05 and 2005/06 than in previous years due to rooms being out of commission as a result of hurricane damage, as well as units being converted to condominiums.

## HIGHWAY

As mentioned earlier, the Orlando Metropolitan Area has one of the fastest growing populations in the country, and, as a result, the number of new motor vehicles coming into the area is growing rapidly. Due to this growth, and the fact that the private automobile is the predominant mode of transportation, the area's highway system is becoming increasingly congested. The indicators used to measure the growth in congestion include traffic counts, vehicle miles traveled, vehicle registrations, traffic crashes, rental car activity, gasoline consumption, and air pollution.

## Traffic Counts - Major Roadways

One of the main methods for measuring the level of activity on an area's highway system is the collection of traffic counts on major roadways. More than 300 traffic counts for various locations in Orange, Seminole, and Osceola Counties are obtained each year by the METROPLAN ORLANDO staff from the Florida Department of Transportation (FDOT), as well as from the three counties and the City of Orlando. This information is published in a Traffic Count Report, which is shown in Appendix A.

The tables shown below contain FDOT daily (24-hour) traffic counts averaged annually on major roadways in the area from 2001 through 2005:

| $\boldsymbol{I - 4}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ |

Source: Florida Department of Transportation
In order to illustrate the overall changes in the traffic volumes on these roadways over the past five years, the traffic counts for the locations listed above for each roadway were totaled and averaged for each year. These average counts are shown on the following bar charts: (A set of charts showing the average weekday traffic volumes on an hourly basis at three locations on I-4 is shown in Appendix A beginning on page A-12.)

Note: The major decrease in the average traffic counts on l-4 between 2001 and 2002 is partially due to the auxiliary lane construction projects underway on several segments of I-4 during 2002. In addition, FDOT began using ITS loops on I-4 to count vehicles in 2002 rather than the tubes used in previous years for axle counts. This caused traffic counts to be decreased since the axle error factor was no longer applied.

SR 50

SR 436

## Orange Avenue

SR 434

US 441

US 17/92

John Young Parkway

Kirkman Road

Note: The reduction in the average annual daily traffic volume on Kirkman Road between previous years and 2003 was primarily due to the construction of the six-laning of Kirkman Road from Conroy Road to SR 50, which was underway during most of 2003.

SR 426

## Traffic Counts - Toll Roads

In addition to the major roadways shown above, the Orlando Metropolitan Area has several toll roads that are carrying increasing amounts of traffic. These toll roads are operated by the OrlandoOrange County Expressway Authority (OOCEA), the Florida's Turnpike Enterprise, and Osceola County. They include SR 408 (East-West Expressway), SR 417 (the Greeneway), SR 429 (Western Expressway), SR 528 (Beachline Expressway), Florida's Turnpike, and the Osceola Parkway. The following tables show average daily traffic counts on these toll roads from 2001 through 2005:

| SR $\mathbf{4 0 8}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ |

Sources: Orlando-Orange County Expressway Authority, Florida's Turnpike Enterprise, and Osceola County Engineering Department

In order to illustrate the overall changes in the traffic volumes on these toll roads over the past five years, the traffic counts listed above for each roadway have been averaged for each year. These average counts are shown on the following bar charts:

## SR 417/The Greeneway

SR 429/Western Expressway

## SR 528/Beachline Expressway

Florida's Turnpike

## Osceola Parkway

## Toll Transactions and Revenues

There has been a steady increase in the amount of annual toll transactions and revenues collected on the toll roads in the Orlando Metropolitan Area in recent years. This increase from FY 2001/02 through FY 2005/06 is illustrated in the following tables:

| Transactions | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |

## Vehicle Miles Traveled

The number of vehicle miles traveled (VMTs) on the highway network is an indicator that measures the growth in both the number of vehicles and the distances driven in the Orlando Metropolitan Area. The Florida Department of Transportation annually estimates the VMTs for all the counties in the state by multiplying the lengths of the state and local roads in the counties by the average daily trips on those roads. The following bar charts illustrate the increase in average daily VMTs in Orange, Seminole and Osceola Counties from 2001 through 2005:

Orange County Average Daily
Vehicle Miles Traveled

Osceola County Average Daily Vehicle Miles Traveled

## Seminole County Average Daily Vehicle Miles Traveled

Total Average Daily
Vehicle Miles Traveled

Source: Florida Department of Transportation

## Registered Vehicles

Another indicator that can be used to measure the growth in traffic congestion in the Orlando Metropolitan Area is the increase in the number of vehicles on the highway system. The following bar charts illustrate the number of registered motor vehicles in Orange, Seminole and Osceola Counties from FY 2001/02 through FY 2005/06:

Orange County Registered Vehicles

Osceola County Registered Vehicles

## Seminole County Registered Vehicles

Total Registered Vehicles

[^3]
## Commercial Trucks

Most of the freight moved within and through the Orlando Metropolitan Area is carried by commercial trucks (trucks weighing more than 5,000 lbs.). The increase in the amount of freight carried by truck in the area has required an increase in the number of commercial trucks. This increase from FY 2001/02 through FY 2005/06 is illustrated in the following charts: (The number of commercial trucks shown in this section is also included in the total number of registered vehicles shown in the previous section.)

Orange County Commercial Trucks

Osceola County Commercial Trucks

## Seminole County Commercial Trucks

Total Commercial Trucks

[^4]
## Licensed Drivers

Along with the number of registered vehicles, the number of licensed drivers in the area is another indicator of traffic congestion levels. The following bar charts illustrate the number of licensed drivers in Orange, Seminole and Osceola Counties from 2002 through 2006:

Orange County Licensed Drivers

Osceola County Licensed Drivers

## Seminole County Licensed Drivers

Total Licensed Drivers

## Traffic Crashes

The number of traffic crashes occurring at particular locations in the area may indicate where transportation system improvements are needed. Statistics for locations in Orange, Seminole, and Osceola Counties where ten or more crashes occurred are obtained each year by the METROPLAN ORLANDO staff. These statistics are provided by the Florida Department of Transportation (FDOT), as well as the three counties, and the City of Orlando. This information is published in an annual Crash Surveillance Report, which is shown in Appendix B.

The following table shows the top twenty locations in the Orlando Metropolitan Area that had the highest number of crashes during 2005:

2005 High Crash Locations

| Location | \# of Crashes | \# of Injuries | \# of Fatalities |
| :---: | :---: | :---: | :---: |
| Kirkman Rd. \& Conroy Rd. | 122 | 45 | 0 |
| US 17/92 \& SR 436 | 121 | 7 | 0 |
| I-4 \& SR 436 (on l-4) | 120 | 18 | 0 |
| SR 436 \& I-4 (on SR 436) | 119 | 9 | 0 |
| SR 436 \& Howell Branch Rd. | 112 | 14 | 0 |
| SR 436 \& Wymore Rd./Douglas Ave. | 103 | 7 | 1 |
| SR 436 \& North Lake Blvd. | 97 | 10 | 0 |
| US 192 \& John Young Pkwy. | 96 | 5 | NA |
| SR 436 \& Curry Ford Rd. | 91 | 29 | 0 |
| SR 436 \& SR 434 | 91 | 9 | 0 |
| Kirkman Rd. \& International Dr. | 82 | 35 | 0 |
| SR 436 \& CR 427 | 78 | 6 | 0 |
| US 192 \& Hoagland Blvd. | 74 | 15 | NA |
| SR 50 \& Alafaya Tr. | 71 | NA | NA |
| US 17/92 \& Lake Mary Blvd. | 69 | 10 | 0 |
| John Young Pkwy. \& L.B. McLeod Rd. | 68 | 18 | 0 |
| US 17/92 \& SR 434 | 66 | 7 | 1 |
| US 192 \& Michigan Ave. (Kissimmee) | 64 | 2 | NA |
| SR 50 \& Hiawassee Rd. | 63 | NA | NA |
| Orange Ave. \& Michigan St. | 62 | 11 | 0 |

The following charts illustrate the changes in the total number of crashes and fatalities from 2001 through 2005 as compiled by the Florida Department of Highway Safety and Motor Vehicles for each of the three counties:

## Rental Car Surcharge Revenues

Florida has a substantial rental car market, primarily due to its tourism industry, and the Orlando Metropolitan Area has the largest rental car market in the country. As a result, rental vehicles have a major impact on the levels of traffic congestion in the area, particularly on those roadways in the vicinity of the Orlando International Airport and the tourist attractions. The rental car industry in the Orlando area declined as a result of the September 11, 2001 terrorist attacks and an economic recession, but has generally rebounded since that time. This is illustrated in the charts below, which show the amount of Florida's $\$ 2$-per day rental car surcharge revenues collected in the area from FY 2001/02 through FY 2005/06.

Rental Car Surcharge Revenues Collected in Orange County

Rental Car Surcharge Revenues Collected in Osceola County

Rental Car Surcharge Revenues Collected in Seminole County

Total Rental Car Surcharge Revenues Collected in Orlando Metropolitan Area

Source: Florida Department of Revenue

## Gasoline Consumption

The increase in the consumption of gasoline over a period of several years is another indicator of the growth in the number of vehicles and amount of travel in the Orlando Metropolitan Area. The following charts illustrate the number of gallons of gasoline sold in Orange, Osceola and Seminole Counties, as well as the total for all three counties, from FY 2001/02 through FY 2005/06:

Orange County Gasoline Consumption

Osceola County Gasoline Consumption

Seminole County Gasoline Consumption

Total Gasoline Consumption

Source: Florida Department of Revenue

## State Road Mileage (Lane Miles)

Another indicator of the growth in the number of vehicles and amount of travel in the Orlando Metropolitan Area is the increase in the road mileage in the area. The number of lane miles of state roads in Orange, Osceola and Seminole Counties from 2002 through 2006 is shown in the tables below. These have been divided into interstate facilities (l-4), toll roads such as SR 408, SR 417 and SR 528, and other state roads, such as SR 50, SR 436, SR 434, US 441, US 17/92, etc.

| Orange County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Interstate (I-4) | 162.0 | 175.9 | 175.9 | 175.9 | 175.9 |
| Toll Roads | 534.8 | 543.3 | 543.3 | 556.6 | 592.4 |
| Other State Roads | 908.9 | 923.3 | 928.2 | 928.3 | 940.4 |
| Total | $\mathbf{1 , 6 0 5 . 7}$ | $\mathbf{1 , 6 4 2 . 5}$ | $\mathbf{1 , 6 4 7 . 4}$ | $\mathbf{1 , 6 6 0 . 8}$ | $\mathbf{1 , 7 0 8 . 7}$ |

| Osceola County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Interstate (I-4) | 35.4 | 35.4 | 35.4 | 35.4 | 35.4 |
| Toll Roads | 246.8 | 246.8 | 246.8 | 246.8 | 246.8 |
| Other State Roads | 370.3 | 377.1 | 377.1 | 378.3 | 384.4 |
| Total | $\mathbf{6 5 2 . 5}$ | $\mathbf{6 5 9 . 3}$ | $\mathbf{6 5 9 . 3}$ | $\mathbf{6 6 0 . 5}$ | $\mathbf{6 6 6 . 6}$ |
|  |  |  |  |  |  |
| Seminole County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ |
| Interstate (I-4) | 74.1 | 74.1 | 86.3 | 95.2 | 95.2 |
| Toll Roads | 70.4 | 70.4 | 70.4 | 70.4 | 70.4 |
| Other State Roads | 324.3 | 331.3 | 331.3 | 342.9 | 342.9 |
| Total | $\mathbf{4 6 8 . 8}$ | $\mathbf{4 7 5 . 8}$ | $\mathbf{4 8 8 . 0}$ | $\mathbf{5 0 8 . 5}$ | $\mathbf{5 0 8 . 5}$ |

| Grand Total | $2,727.0$ | $2,777.6$ | $2,794.7$ | $2,829.8$ | $2,883.8$ |
| :--- | ---: | ---: | ---: | ---: | ---: |

## Local Road Mileage (Paved Centerline Miles)

The number of miles of local (city and county) roads in the Orlando Metropolitan Area has also increased in recent years. The table below shows the change in the number of miles of paved local roads in Orange, Osceola and Seminole Counties over the 2001-2005 timeframe, since the latest information available is for 2005. (The numbers in the table reflect the centerline miles of paved roads, information that is collected annually from local governments by FDOT. Lane mileage figures by facility-type classifications for local roads were not available.)

| Local Road Mileage | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Orange County | $3,639.8$ | $3,705.8$ | $3,753.9$ | $3,780.8$ | $3,800.8$ |
| Osceola County | 863.1 | 926.2 | 945.6 | 957.7 | 978.8 |
| Seminole County | $1,243.4$ | $1,409.5$ | $1,425.5$ | $1,399.1^{*}$ | $1,412.9$ |
| Total | $\mathbf{5 , 7 4 6 . 3}$ | $\mathbf{6 , 0 4 1 . 5}$ | $\mathbf{6 , 1 2 5 . 0}$ | $\mathbf{6 , 1 3 7 . 6}$ | $\mathbf{6 , 1 9 2 . 5}$ |

## Travel Time Index

The Texas Transportation Institute (TTI) at Texas A \& M University annually produces a study comparing the traffic congestion levels of many urban areas around the country, including the Orlando Metropolitan Area. The TTI report includes a comparison of the travel time indexes of the urban areas. This index is based on the free-flow travel speeds of 60 mph on freeways and 35 mph on major arterials. An index of greater than 1.0 indicates that the travel speeds on an area's roadway system are lower than the free-flow speeds, thus increasing the travel times on the system. Conversely, an index of less than 1.0 indicates that the speeds are higher than the free-flow speeds, thus reducing the travel times on the system. Using the example of Los Angeles and Corpus Christi, Texas, as a comparison of the highest and lowest indexes, the travel time index for Los Angeles in 2003 was 1.75 , while the same index for Corpus Christi was 1.05 . The travel time indexes for the Orlando Metropolitan Area for 1999 through 2003 are shown on the following chart:

Orlando Metropolitan Area Travel Time Index

Source: Texas Transportation Institute - 2005 Urban Mobility Report

This chart shows that the travel time index for the Orlando Metropolitan Area's highway system increased only a small amount from 1999 to 2003, and dropped slightly between 2002 and 2003. This indicates that the mobility improvements that have been implemented in the area, such as computerized signals, electronic toll collection, etc. may have had some impact on improving traffic flow.

Note: The Texas Transportation Institute's 2006 Urban Mobility Report, which will include the 2004 travel time index figures, was not available at the time this report was published.

## Air Quality

Traffic congestion can have a major impact on the air pollution levels in an urban area. The pollutant that has been a cause for concern in the Orlando Metropolitan Area in recent years is ground-level ozone, for which motor vehicle emissions are a primary source. The Federal Environmental Protection Agency (EPA) standard for ozone is 85 parts per billion averaged over any eight-hour period. An area will be considered as nonattainment (not meeting the standard) if the average of the annual fourth highest ozone readings at any monitoring site for any three-year period equals or exceeds the 85 parts per billion standard.

In 2007, EPA averaged the fourth-highest eight-hour average ozone readings in urban areas around the country from 2004 through 2006 to determine which areas would be considered to be in attainment with the EPA standard and which would be designated as nonattainment. Based on this evaluation, the Orlando Metropolitan Area was determined to be in attainment for air quality. However, several ozone readings exceeded the EPA standard during 2005 and 2006, and if additional violations occur during 2007 or 2008, the Orlando Metropolitan Area could eventually be designated as a nonattainment area. In order to help prevent a nonattainment designation, such measures as the expansion of flex time and telecommuting, vehicle maintenance, and the use of alternate forms of transportation, are being promoted as part of a public awareness campaign. These measures have helped lead to a downward trend in ozone readings, as shown in the charts below.

The line charts in Appendix C show the highest monthly eight-hour average ozone readings for 2006 at each of the four monitoring stations operated by the Florida Department of Environmental Protection in the Orlando Metropolitan Area. The following bar chart shows the fourth highest eight-hour average readings for the area from 2002 through 2006:

## 4th Highest 8-Hour Average Ozone Readings for Orlando Metropolitan Area

Source: Florida Department of Environmental Protection

## MANAGEMENT AND OPERATIONS

## Overview

Management and Operations (M\&O) involves the implementation of various strategies and technologies to improve traffic flow on existing roadways without adding lanes or building new roadways. METROPLAN ORLANDO has been placing a greater emphasis on the planning and implementation of M\&O strategies in recent years as a cost-effective method to relieve traffic congestion in the area.

M\&O strategies include the use of Intelligent Transportation Systems (ITS). A number of ITS technologies are currently being applied in the Orlando area, including the use of 70 surveillance cameras and 17 variable message signs along I-4 from the St. Johns River bridge to west of US 192. Additionally, the Orlando-Orange County Expressway Authority has installed 50 cameras along SR 408 from Kirkman Road to SR 417, SR 417 from SR 408 to the Seminole County line, as well as at mainline toll plazas throughout the expressway system. These cameras and signs enable the Florida Highway Patrol to determine the location and severity of traffic incidents and inform motorists of delay times, alternate routes, etc. Several toll plazas on the 100-mile expressway system have been converted to "open road tolling" express lanes, which provide another application of technology. It allows drivers to bypass the cash lane because electronic monitors over the roadway collect the tolls as the E-PASS (electronic tolling) vehicles travel at posted highway speed.

LYNX, the transit operator for the three counties, has deployed an automated vehicle location (AVL) system and electronic kiosks for the downtown LYMMO system. LYNX is also testing the application of traffic signal priority as part of their bus rapid transit project in South Seminole County.

An Automated Traveler Information Service (511) service, which was initially operated by FDOT along 50 miles of the l-4 corridor in the Orlando area, enables callers to get up-to-the-minute information simply by saying aloud the area of the Interstate about which they are seeking information. This service, which has since been expanded statewide, enables commuters to determine the best route to take to their respective destinations by providing information on traffic congestion due to accidents, etc., as well as suggested alternate routes. Information on transit service is also available. The service started in Central Florida in 2002, and more than 1 million people used the service during 2006.

In addition to considering the benefits from M\&O strategies, and based on responses to the METROPLAN ORLANDO Survey of Public Opinion on Transportation Issues, more resources will be invested in traffic signal timing and computer coordination in some corridors. Within the METROPLAN ORLANDO area, there are approximately 1,500 traffic signals. Control of these traffic signals is split between various jurisdictions. Studies have shown that retiming traffic signals may improve the operations of a corridor (reduce delays and stops, improve safety, reduce fuel consumption and emission) from 5 to 25 percent. The use of computer-coordinated traffic signal systems in the area is discussed further in the next section

## Computer-Coordinated Traffic Signals

As mentioned on the previous page, computer-coordinated traffic signal systems, which improve traffic flow and help traffic signals become more efficient, are being deployed in Orange, Osceola and Seminole Counties. This technology is being deployed for traffic signals on International Drive in Orange County. Seminole County is complementing this technology by installing more than twenty Variable Message Signs at the interchange areas with Interstate 4 and at the intersections of US 17/92 with both SR 436 and SR 434. These signs will convey real-time traffic information to motorists and can provide detour routing for incidents on I-4. In addition, during 2005, Orange County deployed several similar message signs in the vicinity of I-4 on SR 535, Central Florida Parkway, Sand Lake Road, John Young Parkway, and Lee Road.

The growth in the number of computer-coordinated signals in the area from 2002 through 2006, as compared to the total number of signals, is illustrated in the following tables:

| Orange County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | 2006 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Total Traffic Signals | 870 | 905 | 926 | 950 | 969 |
| Computer Coordinated Signals | 598 | 647 | 689 | 693 | 700 |
| $\%$ Total Traffic Signals | $68.7 \%$ | $71.5 \%$ | $74.4 \%$ | $72.9 \%$ | $72.2 \%$ |

| Osceola County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | 2006 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Total Traffic Signals | 121 | 124 | 130 | 139 | 148 |
| Computer Coordinated Signals | 20 | 23 | 41 | 50 | 62 |
| $\%$ Total Traffic Signals | $16.5 \%$ | $18.5 \%$ | $31.5 \%$ | $36.0 \%$ | $41.9 \%$ |

| Seminole County | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | 2006 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Total Traffic Signals | 330 | 335 | 340 | 356 | 366 |
| Computer Coordinated Signals | 195 | 198 | 200 | 202 | 206 |
| $\%$ Total Traffic Signals | $59.1 \%$ | $59.1 \%$ | $58.8 \%$ | $56.7 \%$ | $56.3 \%$ |

| Total | $\mathbf{2 0 0 2}$ | $\mathbf{2 0 0 3}$ | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 5}$ | $\mathbf{2 0 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Total Traffic Signals | 1,321 | 1,364 | 1,396 | 1,445 | 1,483 |
| Computer Coordinated Signals | 813 | 868 | 930 | 945 | 968 |
| $\%$ Total Traffic Signals | $61.5 \%$ | $63.6 \%$ | $66.6 \%$ | $65.4 \%$ | $65.3 \%$ |

Source: Local Government Engineering Departments

## Road Rangers

Road Rangers is a service operating on I-4 and the toll roads in the area that involves the use of specially-equipped trucks to help stranded motorists and minimize traffic congestion caused by minor accidents and vehicle breakdowns. The trucks are equipped to make minor car repairs, such as tire changes, fuel/fluid replacement, belt and hose replacement, etc. Other Road Ranger services include removing vehicles and debris from travel lanes, assisting with non-injury accidents, and providing communication with law enforcement and emergency services.

LYNX, the local transit provider, is operating the Road Rangers service in partnership with FDOT on I-4 from I-95 in Volusia County to the Polk/Osceola County line. This service utilizes twelve trucks that operate 24-hours-a-day, seven-days-a-week. The Orlando-Orange County Expressway Authority (OOCEA) also operates a Road Ranger service jointly with Florida's Turnpike Enterprise on the toll roads in the Orlando area, including SR 408, SR 417, SR 429, and SR 528. This service utilizes six vehicles, and has been in operation since 2001. In addition, Florida's Turnpike Enterprise operates its own Road Ranger vehicles on the Florida's Turnpike mainline facility.

The number of Road Ranger service assists that occurred on I-4 and the toll roads in the area between 2002 and 2006 is shown in the following chart:

Road Ranger Service Assists

Source: Florida Department of Transportation, LYNX, Orlando-Orange County Expressway Authority, Florida's Turnpike Enterprise

## E-PASS/SunPASS Transponders

Another ITS technology that is being successfully implemented in the area is the use of an electronic toll collection system on the area's toll roads. OOCEA's system, called E-PASS, began operating in 1994, and, since 2001, has been integrated with the SunPASS system operated by Florida's Turnpike Enterprise on toll roads throughout the state of Florida. E-PASS/SunPASS users have transponders on their vehicles which enable them to have their tolls collected automatically as they pass through the tollgates. The following chart illustrates the substantial increase in the number of E-PASS/SunPASS transponders in use in the area from 2002 through 2006:

## E-PASS/SunPASS Transponders in Use

[^6]
## LYNX Service

As the highway system in the Orlando area becomes more congested, alternative modes of transportation are becoming an increasingly important means of transporting commuters. LYNX is the area's local transit provider, and the majority of LYNX's passengers are dependent on transit service to get to work, shopping, etc. As a result, this service is essential to the area's economy and the quality of life of many of its citizens. The transit services provided by LYNX include:

- fixed-route bus service
- the LYMMO downtown circulator service (on an exclusive busway route)
- shuttle services
- an express bus service between Volusia County and Orlando in cooperation with VOTRAN
- a transportation disadvantaged service called ACCESS LYNX
- a van pooling service called VanPlan
- a ridesharing matching service called AutoMates

The number of vehicles used by LYNX to provide these services from FY 2001/02 through 2005/06 is shown in the following table:

| LYNX Vehicles | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Fixed Route Buses* | 244 | 236 | 230 | 237 | 247 |
| ACCESS LYNXVehicles | 210 | 155 | 159 | 139 | 137 |
| VanPlan Vehicles | 79 | 65 | 57 | 54 | 50 |

*Includes LYMMO and shuttle vehicles.
The number of passenger boardings on the LYNX services from FY 2001/02 through 2005/06, as well as the vehicle miles traveled, is illustrated in the following charts:

LYNX Fixed-Route Bus Ridership

LYNX LYMMO Ridership

LYNX Special Shuttle Ridership

Note: LYNX shuttle ridership figures have decreased since FY 2001/02 due to the enforcement by the Federal Transit Administration of a regulation regarding how and when public transit agencies can operate shuttle services.

## ACCESS LYNX Ridership

LYNX VanPlan Ridership

Note: LYNX's VanPlan ridership decreased primarily due to increased competition with VOTRAN and Space Coast Area Transit vanpools for commuters living in Volusia and Brevard Counties. LYNX is focusing on marketing, adding employers to the VanPlan program, and improving customer satisfaction to increase VanPlan ridership.

## LYNX Total Ridership

Note: The total ridership figures also include the number of VOTRAN Express passengers traveling from Volusia County to downtown Orlando. The VOTRAN figures are shown separately in the table in the Executive Summary on page vi.

LYNX Fixed-Route Vehicle Miles Traveled

## Average Mileage of LYNX Bus Fleet

In order to maintain the highest service standards possible, LYNX regularly purchases new buses to replace older buses that have exceeded the mileage criteria used by LYNX for replacement. This helps alleviate interruptions in service caused by mechanical problems, etc. Typically, LYNX retires a bus from service after it has reached about 600,000 miles. However, the Federal Transit Authority's minimum service life for large transit buses is 500,000 miles, and LYNX currently has more than 100 buses with average mileages of 550,000 to 650,000 miles, of which 35 were scheduled to be replaced during FY 2005/06. LYNX would prefer to retire its buses with mileages in the 550,000-mile range if funding becomes available. As the bus fleet ages over time, the need for replacement buses will become increasingly important, in addition to the need for new buses to expand the fleet. The average mileage of LYNX's bus fleet from FY 2001/02 through 2005/06 is illustrated in the following chart:

## Average Mileage of LYNX Bus Fleet

Source: LYNX

## Carpool Matching Program

In order to help alleviate traffic congestion, LYNX has operated a carpool matching program in the area for many years. This is a free service that involves matching commuters that are interested in carpooling with other like-minded commuters that live within three miles and work within one mile of one another. Commuters are also matched according to personal preferences, such as smoking, gender match, work flexibility, and driving or riding preferences. The number of persons participating in the carpool matching program from FY 2001/02 through 2005/06 is shown in the following chart:

## LYNX Carpool Matching Participants

[^7]
## I-RIDE Service

I-RIDE, a trolley service that runs in the International Drive corridor, is operated by the International Drive Master Transit and Improvement District, and currently utilizes 11 trolleys. The total number of passenger boardings on the I-RIDE system from FY 2001/02 through 2005/06 is illustrated in the following chart:

I-RIDE Ridership

Source: International Drive Master Transit and Improvement District

## Park-and-Ride Lots

For the past several years, there have been four designated park-and-ride lots in the Orlando Metropolitan Area, all operated by the Florida Department of Transportation. The following table shows the locations of these lots, the number of parking spaces, and the average number of occupied spaces during 2005 and 2006. (FDOT conducts weekday occupancy surveys of the park-and-ride lots on a quarterly basis.)

| Location | \# Parking Spaces | Average \# Spaces <br> Occupied - 2005 | Average \# Spaces <br> Occupied - 2006 | \% Change |
| :--- | :---: | :---: | :---: | :---: |
|  | 39 | $11(28.2 \%)$ | $6(15.4 \%)$ | $-45.5 \%$ |
| SR 50 \& SR 419 | 85 | $29(34.1 \%)$ | $48(56.5 \%)$ | $+65.5 \%$ |
| SR 528 \& SR 15 | 15 | $14(93.3 \%)$ | $23(153.3 \%)$ | $+64.3 \%$ |
| US 192 \& Shady Ln. | 111 | $11(9.9 \%)$ | $15(13.5 \%)$ | $+36.4 \%$ |

Source: Florida Department of Transportation
Additional lots in west Volusia County are located at I-4 and Saxon Blvd. (119 spaces) and I-4 and Dirksen Blvd. (50 spaces).

## School Bus Ridership

In addition to the public transit systems in the area, the public school districts in Orange, Osceola and Seminole Counties all operate major transportation systems in order to transport children to and from school each day by bus. The total number of public school students in each county school district from 2001/02 through 2005/06, the number and percentage of students transported by bus, and the number of school buses on daily routes, are shown in the following tables:

| Orange County | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| \# Public School Students | 151,826 | 159,600 | 166,818 | 177,771 | 176,804 |
| \# Students Riding Buses | 69,482 | 72,210 | 74,281 | $69,810 *$ | 71,087 |
| \% Total Students Riding Buses | $45.8 \%$ | $45.2 \%$ | $44.5 \%$ | $39.3 \%$ | $40.2 \%$ |
| \# Buses on Daily Routes | 938 | 979 | 1,083 | 1,017 | 1,067 |

* The number of Orange County students riding buses during the 2004/05 school year was adjusted downward due to the use of a more accurate method of counting students to avoid duplications.

| Osceola County | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| \# Public School Students | 40,000 | 41,000 | 44,240 | 50,000 | 49,194 |
| \# Students Riding Buses | 19,000 | 20,000 | 21,254 | 22,167 | 23,388 |
| \% Total Students Riding Buses | $47.5 \%$ | $48.8 \%$ | $48.0 \%$ | $44.3 \%$ | $47.5 \%$ |
| \# Buses on Daily Routes | 226 | 232 | 259 | 292 | 308 |

| Seminole County | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| \# Public School Students | 61,972 | 63,269 | 63,382 | 67,083 | 67,698 |
| \# Students Riding Buses | 27,818 | 30,599 | 31,881 | 32,218 | 31,881 |
| \% Total Students Riding Buses | $44.9 \%$ | $48.4 \%$ | $50.3 \%$ | $48.0 \%$ | $47.1 \%$ |
| \# Buses on Daily Routes | 346 | 350 | 365 | 386 | 385 |

| Total | $\mathbf{2 0 0 1 / 0 2}$ | $\mathbf{2 0 0 2 / 0 3}$ | $\mathbf{2 0 0 3 / 0 4}$ | $\mathbf{2 0 0 4 / 0 5}$ | $\mathbf{2 0 0 5 / 0 6}$ |
| :--- | ---: | ---: | ---: | ---: | ---: |
| \# Public School Students | 253,798 | 263,869 | 274,440 | 294,854 | 293,696 |
| \# Students Riding Buses | 116,300 | 122,809 | 127,416 | 124,195 | 126,356 |
| \% Total Students Riding Buses | $45.8 \%$ | $46.5 \%$ | $46.4 \%$ | $42.1 \%$ | $43.0 \%$ |
| \# Buses on Daily Routes | 1,510 | 1,561 | 1,707 | 1,695 | 1,760 |

The total numbers of school bus passenger boardings per year for each county for the 2001/02 to 2005/06 school years are shown on the following charts:

## AVIATION

## Scheduled/Charter Service

Aviation is another important mode of transportation in the Orlando Metropolitan Area. Due to the large number of tourists, business travelers, and residents flying to and from Orlando, the Orlando International Airport has been one of the fastest growing airports in the world for several years. Due to a decline in tourism resulting from the September 11, 2001 terrorist attacks and a weaker economy, there was a decrease in the number of passengers at the Orlando International Airport, as well as a reduction in the amount of cargo and number of operations (take-offs and landings) handled at the airport in 2001 and 2002. However, these statistics have rebounded since 2002, reflecting the improved economy.

The following charts show the number of passengers, tons of cargo, and operations at the Orlando International Airport from 2002 to 2006:

## Orlando International Airport Passengers

## Orlando International Airport Cargo

Orlando International Airport Aircraft Operations

Source: Greater Orlando Aviation Authority

The Orlando Sanford International Airport has also grown rapidly in recent years. This airport handles international charter flights from Great Britain, as well as scheduled domestic flights on Pan Am to smaller airports in the Boston, Chicago, Philadelphia, and St. Louis areas. The following charts show the number of passengers, tons of cargo, and operations at the Orlando Sanford International Airport from 2002 to 2006:

## Orlando Sanford International Airport Passengers

Orlando Sanford International Airport Cargo

## Orlando Sanford International Airport Aircraft Operations

Source: Sanford Airport Authority

## General Aviation

As mentioned above, the Orlando International and Orlando Sanford International Airports provide commercial and charter airline service within the Orlando Metropolitan Area. The general aviation airports, which handle private and business air traffic, are also an important part of the area's aviation system. These include the Orlando Executive and Kissimmee Gateway Airports. The following charts show the number of operations that have occurred at these airports from 2002 through 2006:

Orlando Executive Airport Aircraft Operations

Source: Greater Orlando Aviation Authority

Kissimmee Gateway Airport Aircraft Operations

Source: Kissimmee Gateway Airport

## RAIL

## Passenger Service

At the present time, passenger rail service in the Orlando Metropolitan Area is provided by Amtrak, which has stations in Orlando, Winter Park, and Kissimmee, and the Auto Train service, which runs between Sanford and the Washington D.C. area. The following charts show the number of rail passengers that utilized these stations from FY 2001/02 through FY 2005/06:

Amtrak Ridership - Orlando

Amtrak Ridership - Winter Park

Total Rail Ridership

Source: Amtrak

Note: According to Amtrak, ridership in the Orlando area has decreased in recent years due to several factors. These include the lack of schedule reliability for Amtrak trains on CSX-operated tracks, more discount airfares between Orlando and the northeast U.S., and the reduction of Amtrak service in Florida due to the hurricanes in 2004 and 2005.

## BICYCLING AND WALKING

Bicycling and walking are popular in the Orlando Metropolitan Area due to the mild climate and level terrain, and are excellent transportation modes for short trips to school, work and shopping. They are also popular as fitness and recreational activities. Unfortunately, much of the area is an intimidating and inconvenient environment for those who wish to walk or bike.

Bike lanes and wide curb lanes can make cycling more comfortable on arterial and collector roadways. Paved shoulders improve safety and comfort on rural highways. Shared use paths (trails) provide alternative routes with reduced motor vehicle conflicts. Sidewalks are critical for safe, comfortable pedestrian travel on arterial and collector roads. The majority of pedestrian injuries and fatalities occur to walkers attempting to cross high-speed arterials, often at night. Medians, street lighting, special emphasis crosswalks, and signalized mid-block crossings can assist safer roadway crossings.

METROPLAN ORLANDO's Bicycle and Pedestrian Advisory Committee has been working for several years to ensure that bicycle and pedestrian facilities are included in road projects wherever feasible. This committee has prioritized a number of shared-use paths and other pedestrian and bicycle projects for funding and construction.

## Bicycle and Pedestrian Facilities and Levels of Service

Through the 2025 Long Range Transportation Plan process METROPLAN ORLANDO has collected data for over 1,300 miles of arterial and collector roads and applied this data to the Bicycle Level of Service and Pedestrian Level of Service models developed and adopted by the Florida Department of Transportation. These models measure the level of comfort and perceived safety experienced by the average bicyclist while traveling on the roadway and the average pedestrian while traveling along a road edge or sidewalk. The data for this model has been translated into an " A " through " F " scale, with " $A$ " being the best score and " $F$ " being the worst.

The Level of Service measures for bicycle and pedestrian modes are not comparable to those for highways; a poorer Level of Service score will mean an average person will be less likely to travel on foot or by bike. For example, a Level of Service "D" for a highway will not deter a person from making an auto trip, but a score of "D" for pedestrians or bicyclists will deter many of those users.

## Sidewalks and Pedestrian Level of Service

Sidewalk coverage is the key measure of convenience and access for pedestrians. The table below shows the percentage of sidewalk coverage on the pedestrian plan study network for each county and the entire metropolitan area.

## Percentage of Network Segments with Complete Sidewalks

| County | Percent of Segments with Complete <br> Sidewalks On Both Sides of Street | Percent of Segments with Complete <br> Sidewalk On at Least One Side of Street |
| :--- | :---: | :---: |
| Orange | 41 | 60 |
| Seminole | 35 | 49 |
| Osceola | 36 | 45 |
| OSO | 39 | 56 |

In prior years METROPLAN ORLANDO used a predecessor to the FDOT Pedestrian Level of Service model. Since the new model uses different factors and the network measured with the new model is far more extensive than the one measured in prior years, it is not possible to show improvement (or degradation) of the pedestrian network. The primary factors in the Pedestrian Level of Service model are traffic volume, curb lane width, buffer width between the roadway edge and sidewalk, the presence, coverage and width of sidewalks, and the presence of parked cars and/or trees between the roadway and sidewalk. The results from the new model are illustrated below.

Pedestrian Level of Service on METROPLAN ORLANDO Study Network (Percentage of Miles by Level of Service)

## Bikeways and Bicycle Level of Service

Most local bicycle facility construction programs in the Orlando Metropolitan Area have only been in place since 1994, and few miles of bikeways were built during the early years of these programs. More recently there has been a sharp increase in the miles of bike lanes, paved shoulders and shared use paths built by local governments and the FDOT. The tables below show the numbers of miles of existing on-roadway and off-roadway bikeway facilities.

## Miles of On-Roadway Bicycling Facilities

(Bike Lanes, Paved Shoulders and Undesignated Bike Lanes)

## Miles of Shared-Use Pathways

(Rails-to-Trails facilities and other bicycle and pedestrian pathways)

Miles of Sidewalk Bikeways
(Sidewalks designated as bicycling facilities)

## Number of Grade-Separated Pedestrian \& Bicycle Facilities (Overpasses and underpasses)

The existence of bike lanes, undesignated bike lanes and paved shoulders does not fully address the level of comfort that bicyclists feel while traveling on roadways. The Bicycle Level of Service model calculates the most important factors bicyclists assess when judging their level of comfort on a roadway. These factors are traffic volume, motor vehicle speeds, percentage of heavy truck traffic, curb lane width, paved shoulder or bike lane width, pavement quality, and the presence of parallel on-street parking. The results from the model are illustrated below.

## Bicycle Level of Service on

 METROPLAN ORLANDO Study Network(Percentage of Miles by Level of Service)

## Bicyclist and Pedestrian Injuries and Fatalities

The charts below illustrate the changes in bicyclist and pedestrian injury and fatality rates (crashes per 100,000 population per year), comparing the combined years of 1990 through 1997 and 1998 through 2005. Factors that contribute to these rates include education programs, the existence of facilities, and the amount of bicycling and walking that people perform. This last factor is unknown, so it is premature to say that bicycling or walking has become more or less safe during these eight years.

Bicyclist Injury Rates per 100,000 Population

Bicyclist Fatality Rates per 100,000 Population

Pedestrian Injury Rates per 100,000 Population

Pedestrian Fatality Rates per 100,000 Population

## Bicycle Crash Locations

The following table contains the locations in the three-county area where two or more bicycle crashes occurred during 2005:

| Location | \# of Crashes |
| :--- | :---: |
| Orange County | 2 |
| Anderson St. \& Division Ave. | 2 |
| Columbia St. \& Westmoreland Blvd. | 2 |
| Goldenrod Rd. \& Acadian Dr. | 2 |
| Michigan St. \& Paseo Ave. | 2 |

| US 17/92 \& SR 436 | 2 |

## PORT CANAVERAL

Although Port Canaveral is in Brevard County and is thus outside of the Orlando Metropolitan Area, much of the cargo that is handled at the port, and many of the port's cruise ship passengers, are destined for this area. As a result, Port Canaveral is considered to be an important regional asset. This port's freight and passenger statistics from FY 2001/02 through FY 2005/06 are shown in the following charts:

## Port Canaveral Passengers

## Port Canaveral Cargo

[^9]
## TRANSPORTATION CAPITAL IMPROVEMENT FUNDING

In order to provide the Orlando Metropolitan Area's citizens with a transportation system that continues to enable them to get where they want to go, many millions of dollars from federal, state and local funding sources have been programmed for transportation infrastructure improvements in recent years. These improvements include the construction of new highways and the widening of existing highways, as well as transit system improvements such as purchasing new transit vehicles and installing bus shelters and transit centers. Numerous improvements have also been made to the airports in the area, such as terminal expansions and runway improvements. In addition, bicycle and pedestrian facilities such as trails and sidewalks have been built in the area. The total amounts of federal, state and local funds that have been programmed for highway, transit, aviation and bicycle and pedestrian capital improvements from FY 2001/02 through FY 2005/06 are shown in the following charts:

Highway Capital Funding for Orange County

Note: As the chart above indicates, the amount of funding programmed for transportation improvements does not necessarily increase every year, but fluctuates from year to year depending on when the funding allocations for various improvements are scheduled. For example, there was a decrease in the amount of highway capital funding programmed in Orange and Seminole Counties between FY 2001/02 and FY 2002/03, since there were fewer major projects coming on line than in previous years. Seminole County's highway funding decreased further in FY 2003/04 and FY 2004/05 due to a reduction in local funding from previous fiscal years, although there was an increase in federal and state funding, and then increased in FY 2005/06. The same principal applies to the charts showing transit, aviation and bicycle and pedestrian funding.

## APPENDIX A

## 2001-2005 TRAFFIC COUNT REPORT

(Note: Due to technical issues, the Orange County Public Works Traffic Engineering Division did not publish a 2004 traffic count report. Therefore, those 2004 counts are not included in this report.)

## ORLANDO URBAN AREA

## 2001-2005 TRAFFIC COUNT REPORT

## Introduction

This report contains 24 -hour bi-directional traffic counts for various locations in Orange, Seminole, and Osceola Counties from 2001 through 2005. The counts are listed alphabetically and are grouped according to the county in which they are located. A set of maps showing the traffic count locations is also provided. FDOT's traffic counts are averaged for each year and most are rounded to the nearest five hundred.

## Methodology

This report was prepared by the METROPLAN ORLANDO staff. The data for this report was provided by the Florida Department of Transportation (FDOT), and the Traffic Engineering Departments of Orange, Seminole, and Osceola Counties. If further information is desired, these agencies can be reached at the following telephone numbers:

## I-4 HOURLY TRAFFIC VOLUMES/LEVEL OF SERVICE

The following line charts show the average weekday hourly bi-directional traffic volumes taken during 2005 at three locations on I-4. Two of the locations are in Orange County and one is in Seminole County. (There were no 2005 hourly l-4 traffic volumes available for Osceola County due to the six laning construction of I-4 from the Polk/Osceola County line to US 192 that was underway.)

The charts also show how these traffic volumes compare with the Level of Service (LOS) thresholds used by the Florida Department of Transportation (FDOT) to measure the quality of traffic flow on a six-lane limited-access freeway such as I-4. LOS is represented by the letters "A" through " F ", with " A " representing the most favorable driving conditions and " F " representing the least favorable. (The FDOT standard for limited access freeways is LOS E. Thus, a freeway segment with LOS F would be considered a congested facility.)

2005 AVERAGE WEEKDAY HOURLY BI-DIRECTIONAL TRAFFIC VOLUMES
I-4 - at SR 408 - ORANGE COUNTY

2005 AVERAGE WEEKDAY HOURLY BI-DIRECTIONAL TRAFFIC VOLUMES
I-4-0.8 MILE SOUTH OF SR 482/SAND LAKE ROAD - ORANGE COUNTY

2005 AVERAGE WEEKDAY HOURLY BI-DIRECTIONAL TRAFFIC VOLUMES
I-4-1.6 MILES NORTHEAST OF SR 434 - SEMINOLE COUNTY

## APPENDIX B

## 2005 CRASH SURVEILLANCE REPORT

# ORLANDO URBAN AREA <br> <br> 2005 CRASH SURVEILLANCE REPORT 

 <br> <br> 2005 CRASH SURVEILLANCE REPORT}

## Introduction

This report contains summary data on those intersections within the Orlando Urban Area where ten (10) or more traffic accidents occurred during calendar year 2005. Information is provided regarding the number of accidents at each intersection, the accident rate, the number of personal injuries and deaths, and the type of accident (e.g. right angle, rear end, etc.). A general location map is provided following the listing of high accident locations.

## Methodology

The data for this report was provided by the Orange, Osceola, and Seminole County Traffic Engineering Departments, and the City of Orlando Transportation Engineering Bureau. The Florida Highway Patrol and local police departments were instrumental in providing these agencies with the necessary information regarding accident location and type.

This report was compiled and published by METROPLAN ORLANDO. Questions or comments may be addressed to:

METROPLAN ORLANDO

## APPENDIX C

## 2006 OZONE CHARTS

These charts show the highest monthly eight-hour average ozone readings for 2006 for each monitoring station operated by the Florida Department of Environmental Protection in the Orlando Metropolitan Area. The Environmental Protection Agency (EPA) standard for ozone is 85 parts per billion (ppb) averaged over any eight-hour period. An area will be considered as nonattainment (not meeting the standard) if the average of the annual fourth highest ozone readings at any monitoring station, for any three-year period, equals or exceeds the 85 parts per billion standard. The Orlando Metropolitan Area is currently considered to be in attainment for ozone.

2006 MAXIMUM 8-HOUR AVERAGE OZONE READINGS SITE 1: 7055 WINEGARD RD., PINECASTLE

2006 MAXIMUM 8-HOUR AVERAGE OZONE READINGS
SITE 2: LAKE ISLE ESTATES, WINTER PARK

2006 MAXIMUM 8-HOUR AVERAGE OZONE READINGS
